PRODUCT DATASHEET

10-INCH SEDIMENT FILTER

String-wound cartridge

A replaceable filter element that helps remove sand, silt, rust flakes and other suspended particles from water.

KEY FEATURES

1. **Depth filtration**
   Wound layers trap particles within the fibers.
2. **Replaceable element**
   Fits a correctly matched filter housing.
3. **Equipment protection**
   Helps reduce sediment in downstream stages.
4. **Simple operation**
   No electricity required by the cartridge.

SPECIFICATIONS

Nominal length	10 inches (25.4 cm / 254 mm nominal)
Filter construction	Wound fibers with a hollow central passage
Filtration method	Mechanical depth filtration
Micron rating	Not confirmed; check the product label
Diameter / exact length	Measure before matching to a housing
Material / operating limits	Confirm from the packaging or manufacturer datasheet

APPLICATIONS & CARE

- Tank, mains or well-water sediment filtration.
- Prefiltration before carbon or RO, when specified.
- Replace when flow falls or the service interval is reached.

Does not remove dissolved salts or hardness, and does not disinfect water. Actual dimensions and micron grade must match your system.
